Full Stack Engineer building production web and mobile applications with React, TypeScript, Node.js, Java/Spring Boot, and React Native. Experience includes energy-sector platforms, REST APIs, authentication, database workflows, CI/CD, production support, and engineering mentoring.

Core Competencies

- **Web and mobile**: React.js, Next.js, TypeScript, JavaScript, React Native, Redux Toolkit.
- **Backend and APIs**: Node.js, Express.js, Java, Spring Boot, REST APIs, Hibernate/JPA.
- **Data and security**: SQL, MySQL, PostgreSQL, MongoDB, Redis, JWT, OAuth 2.0, RBAC.
- **Delivery and testing**: AWS, Docker, GitHub Actions, CodePipeline, Jest, JUnit, Mockito, Postman.
- **Production engineering**: CloudWatch, Datadog, Grafana, Prometheus, debugging, root cause analysis.

Professional Experience

Osbee Solution Private Limited **Kolkata, India**
Full Stack Engineer *Jun 2025-present*

- Built web/mobile interfaces and backend services for an energy-sector platform covering leads, payments, and document workflows.
- Implemented JWT authentication, OAuth 2.0, role-based access controls, token lifecycle handling, and API rate limiting.
- Built Docker-based delivery pipelines with GitHub Actions and AWS CodePipeline; supported deployment and production troubleshooting.
- Integrated DocuSign and Zoho APIs for document signing and CRM synchronization, saving approximately five hours per week of operational effort.
- Used Redis caching and TTL-based invalidation to reduce authorization checks from 80 ms to under 1 ms.
- Built React Native authentication flows, reusable components, shared state, and REST API integration for the platform's mobile client.
- Investigated production incidents using root cause analysis and monitoring through CloudWatch, Datadog, Prometheus, and Grafana.

CodingNinjas **Gurgaon, India**
Software Engineer (Full Stack) *Jun 2023-Apr 2025*

- Delivered React interfaces and REST APIs across five or more web applications for an education and BI dashboard platform serving 50,000 or more active learners.
- Investigated production incidents using log correlation, reproduction, and root cause analysis.
- Mentored 200 or more engineering students through live coding and code reviews, with assessment scores improving 25% within four weeks.
- Collaborated with QA, Product, and UX through sprint ceremonies, story grooming, estimation, and design discussions.

Education

Heritage Institute of Technology — **Kolkata, India**
B.Tech in Computer Science — *Graduated 2023*

Languages

- English and Hindi.

Selected Project

Aesthetic Care Platform — Project link
Next.js, Node.js, MongoDB, Redux Toolkit, Redis, Stripe

- Built a healthcare commerce and service-booking platform spanning customer-facing interfaces and backend APIs.
- Integrated Stripe subscription payments and role-based access controls for application data and protected workflows.
- Centralized application state with Redux Toolkit and used Redis for session lifecycle handling and query caching.
- Achieved a largest contentful paint below two seconds, monitored through CloudWatch and Datadog.

Additional Engineering Experience

- Built reusable React Native components, protected-route flows, API integrations, and rendering optimizations for mobile screens.
- Applied Redux Toolkit and Context API across web/mobile clients, separating session state, server cache, and temporary UI state.
- Implemented WebRTC audio/video and Socket.io messaging, including signaling, connection lifecycle handling, and PostgreSQL-backed message history with cursor-based pagination.
- Automated data seeding, migration, and recurring operational tasks with Python scripts.
- Wrote unit and component tests with Jest and maintained code quality through ESLint, Prettier, and structured code review.

Availability

- 30-day notice period. Open to remote, hybrid, and onsite roles across India.
- Open to international roles that permit working remotely from India.
